available now whistleblower frances haugen s searing exposé of the internal workings of facebook revealing the company s struggles to regain control over its platform and to stop the spread of misinformation in the spring of 2021 when news outlets feasted on the facebook files frances haugen went public as the former employee who blew the whistle on the company by copying tens of thousands of documents she testified to congress and spoke to the media she was hailed at president biden s first state of the union address she made sure everyone understood exactly what the documents revealed facebook not only set its algorithm to reward extremism it knew that its customers were using the platform to foment violence to spread falsehoods to diminish the self esteem of young people and more but how was it that frances was the only employee at the company who dared to step forward the answer to that question is an inspiring tale of one young woman s life and the choices she made from an isolated childhood in iowa to an unaccredited college to one among the few women at google in its heyday frances haugen learned how to focus on what mattered and to ignore her critics to harness the strength of standing in the truth the power of one is equally inspiring the story of a woman who went against the grain again and again and changed the world and horrifying as the culture and practices of facebook are brought into the bright light of day for the first time

it is recognized that the study of mechanical engineering is built of a number of engineering sciences some of which are of basic nature whereas some other are of applied nature basic thermodynamics and basic fluid dynamics are probably the two most important basic engineering sciences in the build of a mechanical power engineer in applied mechanical power engineering sciences the principles introduced and analysed in these two basic sciences are common divisors in other words we may look at these two branches of basic engineering sciences as two legs on which mechanical power engineering applications appear to stand the science of basic thermodynamics is based mainly on a number of basic principles in the form of laws that lead to a number of equations describing and governing the behavior of several mechanical power systems it is therefore of particular importance to introduce and analyse such equations it is also essential to relate these principles and equations to each other and whenever possible to pertinent phenomena and applications this may be achieved via worked examples that stem from from engineering practice the science of basic fluid dynamics is another basic engineering science of equal

importance to basic thermodynamics the principles introduced and analysed by this basic science find applications in almost all applied mechanical power engineering sciences examples of these applied sciences are applied thermodynamics applied fluid dynamics combustion engineering turbo machinery refrigeration and air conditioning power plants gas dynamics propulsion systems etc because of the close inter relation between the science of basic thermodynamics and the science of basic fluid dynamics it has become a common practice to contained both sciences in one textbook under the title basic thermo fluid dynamics the title of the present textbook the present textbook on basic thermo fluid dynamics has been divided into distinct parts a and b in part a we concentrate on basic thermodynamics attempting to present with as much clarity as possible the basic principles therein and giving several worked examples for the sake of clarification in part b we concentrate on basic fluid dynamics applying the same philosophy as in part a in this part also a special section in chapter five containing a rather concise manipulation of the applied science of compressible fluid gas dynamics is presented being an important combined application of the basic principles discussed in thermodynamics and fluid dynamics moreover it was felt by the authors that it is particularly important to include this section on gas dynamics since in spite of being applied in nature it is regarded by many as basic more than applied the last chapter of part a and chapter five of part b cover some important engineering applications of the principles given apriori each of these applications may be looked upon as a brief exposition of an applied engineering science carrying the title of the application under consideration this was felt imperative to the advantage hopefully to be gained by the student the authors are indebted to their colleague dr mohammad s h emeara of the mechanical power engineering department zagazig university for assisting with part of the illustrations and wish to thank him for rendering this assistance in the early stages of preparation of this textbook

in recent years there has been an increasing demand for research evaluation within universities and other research based organisations in parallel there has been an increasing recognition that traditional citation based indicators are not able to reflect the societal impacts of research and are slow to appear this has led to the creation of new indicators for different types of research impact as well as timelier indicators mainly derived from the these indicators have been called altmetrics webometrics or just web metrics this book describes and evaluates a range of web indicators for aspects of societal or scholarly impact discusses the theory and practice of using and evaluating web indicators for research assessment and outlines practical strategies for obtaining many web indicators in addition to describing impact indicators for traditional scholarly outputs such as journal articles and monographs it also covers indicators for videos datasets software and other non standard scholarly outputs the book describes strategies to analyse web indicators for individual publications as well as to compare the impacts of groups of publications the practical part of the book includes descriptions of how to use the free software webometric analyst

to gather and analyse web data this book is written for information science undergraduate and master s students that are learning about alternative indicators or scientometrics as well as ph d students and other researchers and practitioners using indicators to help assess research impact or to study scholarly communication
